

PROJECT 100

Technical Encyclopedia T1.0 — Full Technical Reference
Technical line T1.0 — 24 October 2026 — FIT PROTOCOL filing system

Disclaimer — read first. This is a personal record of one operator's system, not medical advice. Nothing here diagnoses, treats, or prescribes. Doses, ceilings, and branch rules are the operator's own recorded parameters. Check any change with a qualified clinician, especially after gallbladder removal, before changing a supplement, or if a stop rule fires.

Contents — 12 chapters

1	Prime directive — targets, ceilings, branch rules
2	Excavation and return — the record, dated and comparable
3	Hardware locks and clinical constraints
4	Chronometer — the daily sequence by state
5	Solid fuel and nutrition — harvested meals and the Frozen Kitchen
6	Training mechanics and movement classes — the 69-slot week and the 39 techniques
7	Failure matrix and correction
8	Supplements and micronutrient accounting — vectors V1–V6 + V10 and pill grids
9	Planning over months and years
10	Connective tissue and injury
11	Hormonal and metabolic regulation
12	Closing system synthesis — the whole-day equation, interactions, limits

Chapter 1 — Prime directive

This book is a technical filing system for one operator's protocol, not a prescription and not a story. Every quantity is printed in kitchen measures AND true measures. Every ledger is printed in full. Anything not verified is flagged, not filled.

Ceiling / target	Value	What it governs
Energy	2,780 kcal per day	Historical planning figure; whole-day intake verification deferred
Protein	252 g per day	Historical planning figure; whole-day intake verification deferred
Lipids	69 g per day	Historical planning figure for post-cholecystectomy pacing; whole-day intake verification deferred
Hydration	4.0 L per day (4,000 mL / 135.3 fl oz / 16.9 cups)	Water, vectors and tisane together; aggressive hydration when calcium runs high
Body fat	Below 15%	Standing target

SMM readouts — dated observations only

Readout	Value	Status
Disclosed stretch readout	100 lb skeletal muscle mass (SMM)	Stretch goal, openly disclosed as such
Benchmark scan	88.2 lb, dated 2 December 2025	Dated observation

Corridor (true contractile)	90–93 lb	Dated observations only — not validated physiology
Corridor (BIA printout)	92–97 lb	Dated observations only — BIA reads water; the operator reads the tissue underneath

Branch rule (master). Every day runs in exactly one state: State A (morning gym), State B (rest), or State C (evening gym). If a stage is not listed for that state, it does not run. At most one of V1/V6 per day; V5 and V6 never share a day; on rest days both V1 and V6 are inactive.

Operator. Born September 1980. Height 170 cm (5 ft 7 in). Age 46 at the time of this edition. Gallbladder removed — all fat pacing, enzyme rules, and lipid ceilings in this book follow from that single hardware fact.

Chapter 2 — Excavation and return

The record is built from dated observations, not from recalled best days. A scan reads water: glycogen holds about 3 g water per gram, RapiDrem potassium (1,000 mg per scoop) shifts the water compartment the scan measures, and the BIA model estimate of +2 to 4 lb SMM is a model estimate, not a fixed offset — pending measurement. Archived editions stated it as fixed; this book does not.

Scan comparability rules. Same hydration posture, same vector timing, same glycogen state, morning fasting draws for any hormonal verdict. The next scan is a controlled experiment: the variables above are held, or the comparison is not made.

What this book does not claim. No verified whole-day intake total (recipes are not totalled into a daily figure). No measured joint loads or hand forces (bundle labels are nominal). No newly verified recording set counts (planned sets are the owner's session plan). No proof that every muscle was directly isolated or trained equally (the 17 families are a taxonomy).

Chapter 3 — Hardware locks and clinical constraints

Lock	Constraint	How the system answers it
No gallbladder	Continuous bile trickle, no stored bolus; 69 g/day lipid ceiling	Smaller, more frequent fat loads; solid carbohydrate base; Digestive Enzymes Ultra with every meal; addon enzymes matched to the meal
Age 46 — anabolic resistance	Muscle protein synthesis responds less to the same amino acid dose than at 25	Per-meal leucine threshold respected; protein distributed, not dumped once
Age 46 — connective tissue lag	Tendon and joint collagen remodel at roughly one-third the speed of muscle	Load progresses only while the locks stay quiet; supported variations first
Age 46 — endocrine environment	Diurnal testosterone rhythm, rising SHBG with age	Steady consolidation over rapid accretion; morning fasting draws for any verdict
Lumbar L4–S1	Shear tolerance sets the hinge ceiling	Rack pulls above the knee, chest-supported rows, braced belt work
Left ulnar nerve	Elbow flexion under load can irritate the nerve at the medial epicondyle	Neutral grips, range the operator controls, symptoms set the stop

Five-lens block — V1 Ignition. Mechanism: adrenergic drive + cholinergic stack + citrulline nitric-oxide route + osmolyte hyper-hydration. **Stack interaction:** citicoline capsule (05:30) pairs with formula choline; theanine smooths caffeine; beta-alanine 3.2 g is a full daily dose. **Margin:** caffeine ~373 mg + 40–70 mg tea sits above the 400 mg/day guidance figure —

logged. **Monitor:** sleep latency, resting pulse, GI tolerance, tremor. **Stop rule:** palpitations, sustained insomnia, or GI distress — drop the session stimulant and review the stack before the next State A day.

Five-lens block — V6 Pump. Mechanism: nitric-oxide hyperemia without stimulants (citrulline + arginine + nitrate routes) + glycerol hyper-hydration. **Stack interaction:** 5,000 mg betaine on V6 days; 4–5 g taurine total; native creatine counted separately. **Margin:** 0 mg caffeine protects sleep; evening huperzine-A 50 mcg carries a 10–24 h tail — dormant since May 2026, so no current evening tail is running. **Monitor:** evening sleep onset, next-morning grogginess. **Stop rule:** vivid dreams or broken sleep on State C days — pull V6 and review the cholinergic load.

Five-lens block — creatine. Mechanism: phosphocreatine store for ATP re-synthesis between sets. **Stack interaction:** standalone HCl 1.5 g/day (two 750 mg pulses) + V6-native monohydrate 1,000 mg on State C days, never summed. **Margin:** HCl kept out of V1 to preserve blood velocity. **Monitor:** body-water shift on scans, GI tolerance. **Stop rule:** persistent GI distress — hold the pulse and review.

Five-lens block — zinc / copper. Mechanism: zinc and copper compete for absorption. **Stack interaction:** Zinc Supreme removal cut 30 mg supplemental zinc; copper is paused. **Margin:** training-day zinc 25 mg vs UL 40 mg/day. **Monitor:** zinc/copper labs, immune and GI signs. **Stop rule:** any clinician flag on copper status — do not restart copper without a ruling.

Five-lens block — Creami gum. Mechanism: gum network stabilizes the frozen matrix; collagen peptides do not gel — gums stabilize. **Stack interaction:** ONE gum only; dose is conditional on base type. **Margin:** ~0.25% w/w anti-slime law; over-dosing slimes the pint. **Monitor:** texture after re-spin (powdery vs slimy). **Stop rule:** slimy pint — cut the gum dose at the next build; do not add a second gum.

Five-lens block — lipid pacing (no gallbladder). Mechanism: continuous bile trickle, no stored bolus. **Stack interaction:** Digestive Enzymes Ultra with every meal; fat split into small, frequent loads. **Margin:** 69 g/day lipid ceiling; 60–90 g fat sittings are the highest-probability GI event — addon enzymes must match the meal. **Monitor:** post-meal GI symptoms, stool tolerance. **Stop rule:** repeated GI events after a fatty meal — split the fat further and review the enzyme match before repeating the meal.

Chapter 4 — Chronometer: the daily sequence by state

Eleven timed stages. The afternoon is a real stage with its own grid.

Time / stage	State A — Morning gym	State B — Rest	State C — Evening gym
03:30–03:45 Wake pack	3x TestoFX Xtreme, 1x Boron 3 mg, 1x LactoBif 100 intermittent	Same as A	Same as A
04:00 V3 Recovery	V3 shaker + C Defense gummy; greens flush separate	V3 when consumed + gummy; greens flush separate	Same as A
05:00 Breakfast primer	Kasha + Earl Grey; 2x Kyolic 104, 1x NAC 900 mg, 1x NMN 175 mg, 1x Digestive Enzymes Ultra	Normal breakfast; 1x Digestive Enzymes Ultra only	Same meal and grid as A
05:30 Pre-gym primer	1x Citicoline 250 mg swallowed whole	Skipped	Skipped in morning — moves to T-30 before V6
06:00 V1 Ignition	V1 shaker 500–600 mL (16.9–20.3 fl oz / 2.1–2.5 cups); 0 g creatine HCl in V1	Skipped	Skipped — V1 purged all day
09:30 V2 Refuel	V2 in session; 2–3 dates chewed separately	Skipped	Runs in evening session

10:30 Band Deload	100-rep band deload	Active recovery	Normal daytime routine
11:00 V4 Reload	1x R-ALA 300 mg whole, then V4 half-serving	Skipped	Runs after evening session
12:00 Lunch — Meal 2	Solid meal + 1x Digestive Enzymes Ultra + lunch grid (10 caps)	Solid meal + 1x Digestive Enzymes Ultra only — grid skipped	Same meal and lunch grid as A
15:30 Afternoon — Meal 3	Solid meal + 1x Digestive Enzymes Ultra + afternoon grid (6 caps)	Solid meal + 1x Digestive Enzymes Ultra only — grid skipped	Same meal and afternoon grid as A
16:00 V5 Transport	Inactive (reload done via V4)	V5 shaker: creatine HCl 750 mg + collagen 1 scoop, about 10 g + carnitine 15 mL (1 tbsp / 0.5 fl oz) + RapiDrem	Purged
Evening V6 window	Purged	Purged	T-30: 1x Citicoline 250 mg; then V6 shaker; V2 in session; V4 after
18:15 Night stage 1	2x Magnesium Glycinate (240 mg), 1x Tart Cherry, 1x Milk Thistle conditional	Skipped — no night grid on rest days	Same as A (after evening session)
18:30 V10 Shutdown	800 mL (27.1 fl oz / 3.3 cups) hibiscus + creatine HCl 750 mg + glutamine 5 g, weighed + glycine 3–5 g, weighed	Same formulation, if consumed	Same formulation at night

Clock times are anchors for repeatability, not deadlines to obey at the cost of sleep or symptoms. If a stage is not listed for a state, it does not run that day. At least seven hours of sleep opportunity comes first. No vector is a remedy for a short night.

Chapter 5 — Solid fuel and nutrition

Breakfast primer — 05:00

Item	Count / amount	Use
Roasted kasha (dry weight)	About 80 g dry (2.8 oz), simmered	Slow carbohydrate base before training; easy on a gallbladder-free gut
Almond butter	1 tbsp = 15 g (0.53 oz)	Fat in a small, controlled portion rather than one large fatty meal
No-added-sugar syrup	To taste	Palatability without adding to the sugar load
Earl Grey tea	1 cup, about 240 mL (8 fl oz) — about 40–70 mg caffeine	Morning ritual; timed about 2 hours before V1 so caffeine and tannins do not blur the training window

On State B rest mornings the breakfast pill grid is skipped except Digestive Enzymes Ultra with the meal itself. Same food, fewer pills — that is the rest-day de-escalation working as designed.

Fuel composition rule. Protein, vegetables, grains, fat in one bowl. Smaller, more frequent fat loads, a solid carbohydrate base, and a record of what was actually eaten. A few recipes are never totalled and announced as a verified daily intake.

Harvested nutrition — Instagram pull, 6 Oct 2026 (@fudge_fit, 87 posts scanned)

These are harvested records with their captions' macros, not invented meals. A recipe without a macro line is printed without one. Daily totals are NOT computed from these recipes — no verified whole-day intake is claimed.

#	Harvested meal	Caption macros	Caption ingredients (as harvested)
1	Protein Fudge Matrix	706 kcal | 73.7 g protein | 83 g carbs | 30.5 g fiber (52.5 g net) | 15.3 g fat	Hexapro 2 scoops / 88 g; frozen berries 1 cup / 140 g; peanut powder 1 scoop / 13 g; marine collagen 1 scoop / 10 g; All-Bran Buds 1/2 cup / 45 g; cocoa + almond milk
2	Anabolic Chocolate PB Fudge Jars	Per 16 oz jar: 441 kcal | 50.4 g protein | 10.7 g fiber | 31.4 g net carbs | 10 g fat (makes 2 jars)	2 scoops Hexapro Chocolate; 1 scoop hydrolyzed marine collagen; 1/2 cup PB&Me chocolate powdered PB; 1 cup Neilson 3.25% ultra-filtered protein milk (18 g protein); xanthan gum + pink salt; toppings: 1/2 cup frozen berries, 1/3 cup All-Bran Buds
3	Protein Berries Smoothie	1,110 kcal | 136 g protein | 86 g carbs (60 g net) | 26 g fiber | 24 g fat	Hexapro 50 g + PB&Me 48 g + UltraPur 20 g + collagen 10 g + base 8 g protein; bovine collagen peptides (Type I & III)
4	Choco Blueberry Recovery	805 kcal | 97 g protein | 65 g carbs (43 g net) | 22 g fiber | 19.5 g fat	2 cups frozen wild blueberries; 3 cups almond milk; 1/2 cup soaked chia; 1/4 cup egg white powder; 1/8 cup raw cacao; 2 scoops IsoGold chocolate; 1 scoop bovine collagen; pink salt
5	Carnivor Omelette	1,240 kcal | 106 g protein | 24 g net carbs | 34 g fiber | 68 g fat	12x crispy pork belly (lard drained); 3 whole eggs + 1 cup liquid egg whites; sautéed onion; 2x Bon Matin keto tortillas; drizzle (captioned as sugar-free)
6	Chicken & Bean Mega Salad	1,025 kcal | 110.5 g protein | 66 g carbs (38 g net) | 28 g fiber | 37 g fat	280 g grilled chicken breast (88 g protein); 1 cup mixed beans; 150 g avocado dressing; beets + kale bed
7	Egg & Dual-Feta Mega Salad	1,100 kcal | 64 g protein | 60 g carbs (43 g net) | 17 g fiber | 68.5 g fat	5 boiled eggs; 100 g goat + cow feta; 1 cup mixed beans; romaine / peppers / cucumber + olive oil
8	Anabolic Red Meat Matrix	~110 g protein (dual bone-in T-bone steaks); no full macro line in caption	Dual bone-in T-bone steaks + kimchi + dill pickles + barbecue sauce (captioned as sugar-free)
9	Artisan Protein Wraps (3 wraps)	1,195 kcal | 94 g protein | 64 g carbs (30 g net) | 34 g fiber | 62 g fat	POM protein tortillas; hard-boiled eggs; turkey bacon; cheddar; tofu spread; pickled turnips
10	High Protein Tiramisu	Per serving: 310 kcal | 33 g protein	Full recipe in caption — almonds, quark, skyr, whey
11	Post-Workout Dual Recovery Matrix	No macro line in caption	Glycogen fruit matrix (kiwi, pear, cantaloupe, honeydew) + mega salad (red cabbage, romaine, peppers, tomato, cucumber, beans, feta, avocado oil)

Highlight meals (story captions)

Highlight meal	Caption macros	Caption notes
Protein wraps x4	1,645 kcal | 121 g protein | 85 g carbs (16 g fiber) | 93 g fat	—
Reload omelette	685 kcal | 71 g protein | 26 g carbs | 32 g fat	3 eggs; 1 cup whites; 1/2 cup 3% milk; 6 turkey pepperoni; onion
Tuna nutri bowl	No macro line	3x tuna cans
Rest-day blue cheese omelette	No macro line	—
Anabolic recovery bowl	1,394 kcal | 67.3 g protein | 36.7 g net carbs | 35.9 g fiber | 82.1 g fat (52 g MUFA)	—

Protein reference — per 6 oz (170 g), from the operator's saved post

Elk 51 g · Octopus 50 g · Pork tenderloin 45 g · Venison 44 g · Clams 44 g · Mussels 41 g · Shrimp 41 g · Bison 40 g · Halibut 38 g · Crab 38 g · Scallops 35 g · Oysters 32 g · Lobster 32 g.

Harvest notes: fudge jars, 64 oz smoothies, mega salads, omelettes, wraps — all with full macro blueprints where captioned. Powder rotation across recipes: Hexapro (fudge), IsoGold (smoothies), Carnivor (omelette), bovine collagen (smoothies), marine collagen (fudge). Fiber strategy visible: All-Bran Buds, chia, beans, psyllium — relevant to post-cholecystectomy GI management. Daily meal timing/structure beyond the chronometer is still awaited from the operator.

Frozen Kitchen — system specification

Parameter	Value (dual measures)	Rule / note
Machine	Ninja Creami NC501, 800 W	24 oz XL pints only
Fill weight	600–645 g (21.2–22.8 oz) per pint	Fill-weight window; weigh on a 0.1 g scale (dry calibration)
Hot phase	Boiling water 150–200 mL (5.1–6.8 fl oz / 0.6–0.8 cup) at 70–100 °C (158–212 °F)	Hot-to-cold vortex build
Broth + collagen	Bone broth 1 scoop, about 10 g (0.35 oz) + marine collagen 1 scoop, about 10 g (0.35 oz)	Dry matrix dispersed over 90 seconds
Cold phase	Cold milk 250 mL (8.5 fl oz / 1 cup) + pasteurized liquid egg whites 100 g (3.5 oz)	Milk pathway per ledger (A governing, B delta, C flagged)
Powder + sweetener + salt	Protein powder 1.5 scoops, about 38–45 g (1.3–1.6 oz) + sweetener 3–4 tbsp (25–35 g) + salt 1 pinch, about 0.5 g	Allulose FPDF 1.9x where allulose is the sweetener; "no added sugar" claim only — intrinsic milk/fruit sugars counted openly
Gum — conditional	Isolate bases: 1/4 tsp = 1.0 g. Thick / pudding bases: 1/8 tsp = 0.5 g	~0.25% w/w anti-slime law. ONE gum only. Pre-freeze taste audit, then 15-minute settle
Freeze	Lid OFF 2–4 h, then lid on to 24 h total; 16 h minimum; −18 to −20 °C (−0.4 to −4 °F)	OWNER DEVIATION: the manual says snap the lid on and freeze at least 24 h. Lid-off first-phase freezing is the owner's practice, labelled as such
Process	Masher levelling + 30–60 s warm bath → Lite Ice Cream (Sorbet for pure isolate bases) → wall scrape → DRY RE-SPIN FIRST → splash only if powdery, 15–30 mL (0.5–1.0 fl oz)	Manual note: "Do not RE-SPIN before MIX-IN" — MIX-IN before RE-SPIN
Inclusions	Tier 1: borehole + Mix-In, about 10 g frozen-solid. Tier 2: hand-fold. Tier 3: knife-swirl	Swirl finishes use the knife-swirl method
Finish	Leftovers pressed flat + immediate cleaning	Spindle/base: see spindle rule below

Spindle rule (no contradiction carried). The manual position is a damp-cloth wipe of the spindle/base, with removable parts washed. The owner's hot-water spindle flush is printed ONLY here, labelled as an owner deviation matching his Creami practice — it is not presented as the manual position.

Lipid tiers (dose cards)

Tier	Almond butter	Delta per pint	Firewall rule
Tier 1	1 tsp = 5 g (0.18 oz)	+2.7 g fat, +33 kcal	On Neilson (Pathway B) days, Tier 1 builds DROP the almond butter — the +3 g fat Pathway B delta would otherwise breach the 69 g lipid ceiling logic
			Builds 11, 14, 15 omit almond butter on Neilson days

Tier 2	1 tbsp = 15 g (0.53 oz)	+8.0 g fat, +100 kcal

Milk pathways

Pathway	Milk (per 250 mL / 8.5 fl oz / 1 cup)	Status
A — governing	Kirkland UF 2%: 13 g protein / 5.0 g fat / 6 g net carbs, about 120 kcal	Governing ledger. All Pathway A macros below use this milk
B — delta	Neilson Dairy 3.25% High Protein (ultrafiltered): 180 kcal / 18 g protein / 8.0 g fat / 9 g carbs	Delta vs A on EVERY pint: +59 kcal / +5 g protein / +3 g fat / +3 g net carbs. Pathway B = Pathway A + delta, printed in full below. Non-ultrafiltered 3.25% milks (about 9 g protein) are NOT certified substitutes
C — flagged	Silk Protein Almond & Cashew: current label 8 g protein / 0 g sugar / 90 kcal per 250 mL	FLAGGED: the archived grid does not reconcile with the current label. NEVER costed with Pathway A numbers. Full recost pending owner SKU confirmation

Frozen Kitchen — full A/B ledger tables (36 rows)

Pathway A is the governing ledger; Pathway B = Pathway A + 59 kcal / +5 g protein / +3 g fat / +3 g net carbs on every pint. Powder families: Hexapro 1–7, 15–17 (scoop conflict flagged, never fudged); PVL 8–11, 18; Syntha-6 12–14. Inclusion tiers: Tier 1 borehole + Mix-In (about 10 g frozen-solid); Tier 2 hand-fold (builds 11, 14, 15); Tier 3 knife-swirl for swirl finishes.

#	Permutation	Powder	Pathway A — kcal / P / F / NC				Pathway B — kcal / P / F / NC				Inclusion
01	Lemon Chiffon	Hexapro	420	78.5	7.5	9.5	479	83.5	10.5	12.5	Tier 1 — borehole + Mix-In

Chapter 6 — Training mechanics and movement classes

Owner-confirmed 20 October 2026: fifteen slots on each focused day — six per paired muscle group, plus three Core. The two Pilates days stay at twelve slots each.

Day 1 — Chest + Triceps + Core (15 slots)

#	Group	Exercise (stable ID)	Planned sets
1	Chest	Supported single-arm chest press (press)	2
2	Chest	Standing two-arm band chest press (standing-band-chest-press)	1
3	Chest	Standing mid-height band chest fly (standing-band-chest-fly)	1
4	Chest	High-to-low band chest fly (high-to-low-band-chest-fly)	1
5	Chest	Low-to-high band chest fly (low-to-high-band-chest-fly)	1
6	Chest	Single-arm band chest fly (single-arm-cross-body-band-fly)	1
7	Triceps	Seated straight-bar pressdown (pressdown)	2
8	Triceps	Standing mid side band bar pressdown (standing-mid-side-band-bar-pressdown)	1
9	Triceps	Standing shared-handle overhead extension (standing-shared-low-rear-overhead-extension)	1
10	Triceps	Floor-kneeling overhead band extension (floor-kneeling-overhead-extension)	1
11	Triceps	Inclined high-rear alternating elbow extension (inclined-overhead-drive)	1
12	Triceps	Standing inclined single-arm low-rear elbow extension (seated-low-rear-arm-extension)	1
13	Core	Shared-grip side-line anti-rotation reach (standing-two-hand-single-handle-side-draw)	2
14	Core	Floor-kneeling high-line torso fold (floor-kneeling-overhead-held-torso-fold)	1
15	Core	Standing high-line torso fold with grip variations (standing-overhead-held-torso-lean)	1

Day 2 — Legs + Shoulders + Core (15 slots)

#	Group	Exercise (stable ID)	Planned sets
1	Legs	Shoulder band-bar squat (shoulder-band-bar-squat)	2
2	Legs	Seated single-leg band curl (hamstring-curl)	1
3	Legs	Low-squat high-front draw with lateral weight shift (high-front-draw-lateral-squat)	1

4	Legs	Low back bar torso bow (low-back-bar-torso-bow)	1
5	Legs	Front waist bar torso bow (front-waist-bar-torso-bow)	1
6	Legs	Shoulder-braced paired side-line squat (shoulder-braced-torso-bow)	1
7	Shoulders	Standing shared-grip low-front arm raise with torso hinge (standing-inclined-two-hand-single-handle-curl)	2
8	Shoulders	Floor-kneeling alternating low-side arm opening (floor-kneeling-wide-arm-drive)	1
9	Shoulders	Standing high front wide arm sweep (standing-high-front-wide-arm-sweep)	1
10	Shoulders	Standing inclined high rear wide arm drive (standing-inclined-high-rear-wide-arm-drive)	1
11	Shoulders	Standing inclined paired high-rear arm sweep (standing-paired-wide-arm-sweep)	1
12	Shoulders	Floor-kneeling paired high-front arm sweep (bench-straddled-lateral-sweep)	1
13	Core	Shared-grip side-line anti-rotation reach (standing-two-hand-single-handle-side-draw)	2
14	Core	Floor-kneeling high-line torso fold (floor-kneeling-overhead-held-torso-fold)	1
15	Core	Standing high-line torso fold with grip variations (standing-overhead-held-torso-lean)	1

Day 3 — Arms + Back + Core (15 slots)

#	Group	Exercise (stable ID)	Planned sets
1	Arms	Seated neutral-grip curl (curl)	2
2	Arms	Standing alternating low-front curl (standing-curl)	1
3	Arms	Supported low-front band curl (supported-high-front-curl)	1
4	Arms	Thigh-braced cross-body low-side curl (low-side-unilateral-curl)	1
5	Arms	Standing inclined single-arm low-front curl (standing-inclined-unilateral-curl)	1
6	Arms	Standing low-side forearm and grip rotation (standing-low-side-forearm-rotation)	1
7	Back	PLYOSOFT box-supported one-arm row (row)	2
8	Back	Floor-kneeling high-front paired draw (floor-kneeling-high-front-paired-draw)	1
9	Back	Wide-stance paired high-front downward draw (high-front-downward-arm-drive)	1
10	Back	Standing shared-grip high-front draw (high-front-two-hand-draw)	1
11	Back	Floor kneeling high front draw (floor-kneeling-high-front-draw)	1
12	Back	Box seated two hand high front draw (box-seated-two-hand-high-front-draw)	1
13	Core	Shared-grip side-line anti-rotation reach (standing-two-hand-single-handle-side-draw)	2
14	Core	Floor-kneeling high-line torso fold (floor-kneeling-overhead-held-torso-fold)	1
15	Core	Standing high-line torso fold with grip variations (standing-overhead-held-torso-lean)	1

Days 5 and 6 — Pilates full-body (12 slots each)

Day 5: Full body A, moderate. Day 6: Full body B, easy practice. Each keeps twelve slots from the Pilates-kit sequence set: paired row, chest press, leg curl, curl and pressdown, plus bar hip hinge, overhead press, lateral raise and torso rotation (T26–T31) and the Pilates-pair forms. Days 4 and 7 are rest and recovery. Weekly total: **69 exercise slots** — 45 focused (3 x 15) plus 24 Pilates (2 x 12). Planned sets are the owner's session plan, not verified recording set counts. Repeated Core movements across the three focused days are intentional. Five of the eight new Chest techniques are programmed directly into Day 1; the remaining three (decline press, incline press, seated fly) stay library options.

Equipment — bundles and matched pairs (nominal labels, not measured force)

Bundle	Composition	Nominal label
Juggernaut	3 x 85 lb	255 lb nominal
Titan	4 x 75 lb	300 lb nominal
Enforcer	2 matched sets of 2 x 65 lb	130 lb nominal per set
Tricep Specialist	3 x 55 lb + THEFITGUY rope	165 lb nominal
Viper	4 x 45 lb	180 lb nominal
Scalpel	4 x 35 lb	140 lb nominal

Nominal label totals identify bundles. They are not constant hand force, measured joint load, or a hardware working-load limit — no calibrated force-extension curve, resting and stretched lengths, dynamic force trace, or anchor load measurement is inferred from the footage. The photographed Pilates arrangement (two matched 2 x 65 bundles, one per side — 260 lb combined nominal) is a configuration identity, not measured force at either hand. HPYGN matched pairs: **R1 2 x 45 lb, R2 2 x 55 lb, R3 2 x 65 lb**. HPYGN short-band Pilates kit: Tribe Lifting three-piece bar, rotating eyelets, PLYOSOFT padded boxes, handles, ropes, straps and carabiners. Line of pull and anchor zones (high, middle, low) are relative anchor zones, not measured heights. The trainer selects resistance, range and progression.

17 movement families (taxonomy of the reviewed library — not proof that every muscle was directly isolated or trained equally): Curl / elbow-flexion draw · Overhead elbow-extension sequence · High-front bent-arm draw · Wide-arm sweep / inclined drive · Overhead arm drive with torso movement · Band-bar pressdown · Braced torso bow / hinge · Shoulder-bar squat and torso bow · Supported rearward arm movement · Loaded-line hold / balance sequence · Side-line bent-arm draw · Shared-handle downward draw · Head-harness torso bow · Forearm rotation and grip control · Low-front arm raise with torso hinge · Low-line elbow extension · Core and sides / anti-rotation reach.

39 canonical techniques = 25 accepted and source-observed base entries (T01–T25) + 6 Pilates-kit adaptations (T26–T31) + 8 new Chest band techniques (T32–T39, added 19 October 2026). The eight Chest additions are editorial training techniques — illustrated for the library, not claimed as verified personal recording footage. Accepted techniques, source-observed variants, kit adaptations and editorial additions are kept distinct.

ID	Technique	Parameters / key cue
T01	PLYOSOFT box-supported one-arm row	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T02	Supported single-arm chest press	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T03	Seated straight-bar pressdown	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T04	Short-arc shoulder raise	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T05	Seated brace with normal breathing	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T06	Supported sit-to-stand	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T07	Seated single-leg band curl	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T08	Supported calf raise	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T09	Supported side leg lift	

		Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T10	Supported shoulder-blade control	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T11	Seated neutral-grip curl	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T12	Supported backward leg lift	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T13	Box-kneeling elbow extension	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T14	Floor-kneeling overhead band extension	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T15	Supported high-front band curl	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T16	Standing shared-handle overhead extension	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T17	Floor-kneeling high-front paired draw	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T18	Standing band-bar pressdown	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T19	Shoulder band-bar squat	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T20	Standing alternating low-front curl	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T21	Pilates pair: one-arm row	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T22	Pilates pair: single-arm chest press	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T23	Pilates pair: single-leg band curl	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T24	Pilates pair: neutral-grip curl	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T25	Pilates pair: bar pressdown	Source-observed base entry; grip and cue per the detailed exercise registers; trainer selects resistance; no personal measured load established
T26	Standing Pilates bar hip hinge	Pilates-kit adaptation; bar + short-band kit
T27	Standing Pilates bar overhead press	Pilates-kit adaptation; bar + short-band kit
T28	Bent-over Pilates bar row	Pilates-kit adaptation; bar + short-band kit
T29	Floor-seated Pilates bar row	Pilates-kit adaptation; bar + short-band kit
T30	Standing Pilates-handle lateral raise	Pilates-kit adaptation; handles + short-band kit
T31	Standing Pilates bar torso rotation	Pilates-kit adaptation; bar + short-band kit
T32		

	Standing two-arm band chest press	Neutral handle grip; palms inward throughout; press forward at chest height, elbows below shoulders. Day 1, slot 2
T33	Standing mid-height band chest fly	Neutral handles / fly arc; palms forward open, inward as hands meet; hugging arc, soft elbow bend. Day 1, slot 3
T34	High-to-low band chest fly	Neutral handles / fly arc; high rear anchors; sweep forward and down toward the upper abdomen. Day 1, slot 4
T35	Low-to-high band chest fly	Neutral handles / fly arc; low rear anchors; sweep forward and upward to chest height. Day 1, slot 5
T36	Single-arm band chest fly	Neutral handles / fly arc; one rear/side anchor; draw one arm across the front of the chest without turning the trunk. Day 1, slot 6
T37	High-anchor downward band chest press	Neutral handle grip; high rear anchors; press forward and down, finish with soft elbows, hands apart. Library option
T38	Low-anchor upward band chest press	Neutral handle grip; low rear anchors; press forward and upward to upper-chest height without arching. Library option
T39	Box-seated two-arm band chest fly	Neutral handles / fly arc; seated on stable box; shoulder-height rear anchors; hugging arc, planted feet. Library option

Chapter 7 — Failure matrix and correction

Failure	Signal	Correction	Stop rule
Slimy pint	Gum overdose texture after re-spin	Cut the gum dose at the next build; never add a second gum	Two slimy pints in a row — rebuild from the dry calibration
Powdery pint	Dry, crumbly texture after re-spin	Splash only, 15–30 mL (0.5–1.0 fl oz), then re-spin	—
GI event after a fatty meal	Post-meal distress	Split the fat further; match addon enzymes to the meal	Repeated events — hold the meal and review the enzyme match
Broken sleep on State C	Vivid dreams, fragmented night	Review the evening cholinergic load (V6 huperzine-A tail 10–24 h)	Persisting — pull V6 until reviewed
Post-training tremor / sweating / confusion	After V4 (19 g carbs + R-ALA)	Read as a glucose question first, not simple fatigue	Recurrent — clinical review before the next V4 day
Elbow / ulnar symptoms	Medial epicondyle irritation under flexion load	Neutral grips, controlled range	Symptoms set the stop — end the movement
Stale / overfull pint	Fill outside 600–645 g	Re-weigh on the 0.1 g scale; re-level with the masher	—

Chapter 8 — Supplements and micronutrient accounting

Stage cards V1–V6 + V10 (full set)

Vector	Window	Card (short)	Base fluid	Branch
V3 Recovery	04:00 priming	Carnivor Beef Isolate 1 scoop / 33.9 g; marine collagen 1 scoop, about 10 g (0.35 oz); black maca 5 g, weighed; liquid L-carnitine 15 mL (1 tbsp / 0.5 fl oz); C Defense gummy 1, chewed; NAKA greens 20 mL (4 tsp) in a SEPARATE glass	Cold water + separate greens flush (volume not stated — see Gap Log)	Daily anchor, when used

V1 Ignition	State A, 06:00 (primer 05:30)	Igniter Xtreme 2.0, 2 scoops / 28 g (~373 mg caffeine); MuscleEAA 1 scoop / 17.73 g; PeakO2 2,000 mg; betaine 2,500 mg; Citrulline Malate 4–6 g; taurine 2–3 g added; citicoline 1 x 250 mg at 05:30, swallowed whole; creatine HCl in V1: 0 g	500–600 mL (16.9–20.3 fl oz / 2.1–2.5 cups) cold water	State A only
V2 Refuel	In session (~09:30 State A; evening session State C)	BCAA HyperClear 1 scoop / 7.5 g; RapiDrem Electrolytes 1 scoop, about 6.5 g (1,000 mg K, 100 mg Mg, 82 mg Ca, 45 mg Vit C; panel declares sodium 0 mg while NaCl appears in the ingredient list — discrepancy recorded, not resolved); pink salt 1/16 tsp (session window only, never at night); Medjool dates 2–3 whole, chewed solid, never blended	600–750 mL (20.3–25.4 fl oz / 2.5–3.1 cups) cold water	Training days
V4 Reload	After training, 11:00 (State A; after evening session State C)	R-ALA 1 x 300 mg, swallowed whole BEFORE the shake, never opened into liquid; BioSteel Recovery Protein Plus 1 scoop / 36 g half-serving (12 g protein, 19 g carbs, 125 kcal — the only place BioSteel appears); beetroot powder 7 g, weighed; creatine HCl 750 mg (dose 1 of 2); pink salt 1/16 tsp	350–450 mL (11.8–15.2 fl oz / 1.5–1.9 cups) room-temperature water	After training
V5 Transport	State B only, 16:00	Creatine HCl 750 mg (dose 1 of 2 on rest days); collagen 1 scoop, about 10 g — see Gap Log G-V5 on type; liquid L-carnitine 15 mL (1 tbsp / 0.5 fl oz); RapiDrem Electrolytes 1 scoop, about 6.5 g; pink salt 1/16 tsp (daytime sodium only)	500 mL (16.9 fl oz / 2.1 cups) cold water	State B only
V6 Pump	State C only, evening (T-30 min primer)	Pump Xtreme 2 scoops / 31 g, stim-free (0 mg caffeine, verified); MuscleEAA 1 scoop / 17.73 g; PeakO2 2,000 mg; betaine 2,500 mg standalone (5,000 mg on V6 days with native); Citrulline Malate 4–6 g; taurine 2–3 g added (4–5 g total with native); citicoline 1 x 250 mg at T-30	500–600 mL (16.9–20.3 fl oz / 2.1–2.5 cups) cold water	State C only
V10 Shutdown	18:30, every day	Hibiscus tisane; creatine HCl 750 mg (dose 2 of 2); glutamine 5 g, weighed; glycine 3–5 g, weighed; bovine collagen 1 scoop, about 10 g. Optionals only, never nightly: half-dose Medi-C, rare Hey Relax	800 mL (27.1 fl oz / 3.3 cups) hibiscus tisane	Daily anchor

Mutual-exclusion rule (applies every day). At most ONE of V1/V6 per day. V1 is morning, V6 is evening; they never run on the same day. On rest days (State B) both are inactive. V5 and V6 never share a day. Standalone creatine HCl is never stirred into the V6 shaker. Creatine HCl stays at 1.5 g/day as standalone pulses — two 750 mg doses. On a State C day the Pump adds 1,000 mg formula-native creatine monohydrate, counted SEPARATELY — the two creatines are never summed into one figure.

State map. State A (morning gym): V3, V1, V2, V4, V10. State B (rest): V3 when used, V5, V10. State C (evening gym): V3, V6, V2 in session, V4 after session, V10. V7, V8, V9 do not exist.

V1 Ignition — full formula

V1 native payload (per 2 scoops / 28 g Igniter Xtreme 2.0)	Dose	Note
Caffeine	~373 mg	Morning adrenergic drive; + 40–70 mg Earl Grey at 05:00 gives a State A morning of ~413–443 mg with tea — above the 400 mg/day guidance figure; logged, not hidden
L-citrulline (native)	8 g	With 4–6 g Citrulline Malate added, total citrulline base 10.7–12 g
Beta-alanine (native)	3.2 g	A full daily dose — no standalone beta-alanine
DMAE bitartrate (formula-native)	500 mg	Never a standalone pill
Huperzine-A (formula-native)		Acetylcholinesterase inhibitor; half-life ~10–24 h; never a standalone pill

	200 mcg	
L-tyrosine (formula-native)	2,000 mg	Catecholamine precursor
Choline, as bitartrate (formula-native)	400 mg	Acetylcholine precursor, alongside the citicoline capsule
L-theanine (formula-native)	400 mg	Smooths the caffeine edge
Cocoa extract (formula-native)	500 mg	Flavanol blood-flow support
Synapsa bacopa (formula-native)	320 mg	Focus support inside the matrix
Juniper (formula-native)	200 mg	Botanical component of the matrix
Malic acid (formula-native)	3 g	Matrix acid component
Sodium (formula-native)	210 mg	Native to the formula, not an added-sodium pill

V6 Pump — full formula

V6 native payload (per 2 scoops / 31 g Pump Xtreme)	Dose	Note
L-citrulline (native)	8,000 mg	Plus 4–6 g Citrulline Malate added
Beta-alanine (native)	3,200 mg	Present in the Pump base on State C days
Betaine anhydrous (native)	2,500 mg	Pairs with 2,500 mg standalone = 5,000 mg on V6 days
Taurine (native)	2,000 mg	Pairs with 2–3 g added = 4–5 g total
Alpha-GPC (native)	300 mg	Plus 200 mg more inside MuscleEAA
Creatine monohydrate (native)	1,000 mg	Counted separately; never summed with standalone HCl
Sodium (native)	220 mg	Native to the formula; no pink salt added at night
Huperzine-A (native)	50 mcg	Evening cholinergic support; half-life ~10–24 h; never a standalone pill. V6 dormant since May 2026 — a training-schedule state, NOT a protocol deletion
Choline, as bitartrate (native)	300 mg	Alongside the citicoline capsule
L-tyrosine (native)	500 mg	Evening-session catecholamine precursor
Black pepper (native)	10 mg	Formula component
L-arginine, as sulphate (native)	500 mg	Canadian panel; arginine, not agmatine, on this label
NitroVascine (inositol-stabilized arginine silicate)	250 mg	Nitric-oxide pathway support
GlycerPump (glycerol)	2,000 mg	Hyper-hydration
Beetroot (native)	1,000 mg	Nitrate route, separate from the citrulline route
PeakO2 (native in base)	528 mg	Plus 2,000 mg PeakO2 added in the card
Lion's mane / rhodiola / mango leaf (Zynamite) / mushroom blend	500 / 100 / 50 / 50 mg	Botanical components of the Pump base

Caffeine	0 mg	Stim-free, verified

Pill grids in detail

Wake pack — 03:30–03:45, all states

Item	Count / dose	Use / status
TestoFX Xtreme	3 capsules (500 mg fenugreek, 250 mg Sensoril ashwagandha, 200 mg DIM, 9.5 mg piperine)	Morning hormonal support stack; daily
New Roots Boron	1 capsule, 3 mg elemental	Standalone capsule, locked at 3 mg; training-day multi adds 1 mg (4 mg total vs 20 mg UL); daily
CGN LactoBif 100	1 capsule, intermittent	Probiotic — intermittent, not a forced daily

Breakfast grid — 05:00, States A and C (State B: enzyme only)

Item	Count / dose	Use / status
Kyolic Formula 104	2 capsules (600 mg aged garlic extract / 380 mg lecithin)	With the first meal; training days
NMN (California Gold Nutrition)	1 capsule, 175 mg	NAD+ precursor, morning window; training days
NAC	1 capsule, 900 mg	Glutathione precursor; training days
Digestive Enzymes Ultra (Pure Encapsulations)	1 capsule (1,500 FIP lipase)	The every-stack enzyme — in every daily stage pill stack, with every meal

Pre-gym primer — 05:30, State A only

Citicoline 1 capsule, 250 mg, swallowed whole with water. On State C it moves to T-30 minutes before V6. On State B it does not run in the morning. Citicoline is always swallowed whole, never stirred into a shaker.

Lunch grid — 12:00, Meal 2, training days only (10 capsules)

Item	Count / dose	Use / status
Digestive Enzymes Ultra	1 capsule	Every meal
PureGenomics Multi	1 capsule (25 mg Zn, 300 mcg biotin, 1 mg boron)	Multivitamin base; biotin disclosed to the laboratory; boron brings the training-day total to 4 mg
CGN Omega 800	1 softgel (800 mg EPA/DHA: 480 mg EPA / 320 mg DHA)	Omega-3 with the midday fat window
Pure Liver-GI Detox	1 capsule (50 mg silymarin, 50 mg NAC, 47.5 mg curcumin)	Conditional; NAC/curcumin fractions counted with the wider day
Himalaya UriCare	2 capsules	Urinary tract botanical support; training days
KITABIO Pumpkin Seed Oil with Saw Palmetto	3 softgels (3,000 mg pumpkin seed oil + 75 mg 4:1 saw palmetto)	Prostate botanical support, midday window
Pure Curcumin 500 with BioPerine	1 capsule (475 mg curcuminoids + 5 mg piperine)	With TestoFX, the training-day piperine total is 14.5 mg

On State B rest days this entire grid is skipped — only the meal and its enzyme remain.

Afternoon grid — 15:30, Meal 3, training days only (6 capsules)

Item	Count / dose	Use / status
Digestive Enzymes Ultra	1 capsule	Every meal
Higher Healths Beef Liver	3 capsules (1.5 g powder total)	Whole-food B-vitamin, iron and copper matrix from liver
Pure Ligament Restore	2 capsules	Connective-tissue support formula
Pure Lab Copper Glycinate	0 — PAUSED	Paused on all days; prevents copper antagonism after the zinc correction
Designs for Health Zinc Supreme	0 — REMOVED	Removed on all days; removal cut 30 mg of supplemental zinc

Night stage 1 — 18:15, training days only

Item	Count / dose	Use / status
Pure Encapsulations Magnesium Glycinate	2 capsules, 240 mg elemental Mg	Fixed neuromuscular anchor for the night
Inno Nutrition Tart Cherry 10000	1 capsule, dose as labelled on the bottle	Night recovery support
Naturopathic Labs Milk Thistle	1 capsule	Conditional — only when its condition applies that week

On State B rest days Night stage 1 does not run at all — no magnesium or night grid pills. V10 still runs if consumed. Rest-day oral intake is only: 3x TestoFX Xtreme, 1x Boron 3 mg, intermittent LactoBif 100, and Digestive Enzymes Ultra with actual meals — plus V3, V5 and V10 if consumed. Calcium pill: REMOVED from the grid in this revision.

Dose accounting — training day vs rest day (supplemental totals, as printed in the source accounting)

Compound	Training day	Rest day	Reference	Read
Supplemental magnesium	341 mg (up to 646 mg with optionals)	100 mg	UL 350 mg (supplemental)	At/above UL on training days — osmotic effect expected and logged
Vitamin C	452.9 mg (1,452.9 mg with half Medi-C)	150 mg	UL 2,000 mg/day	Within limits; a full Medi-C scoop would exceed — that is why it stays half and optional
Elemental zinc	25 mg (28.78 mg with almond milk)	0 mg (3.78 mg with almond milk)	UL 40 mg/day	Zinc Supreme removal brought this under the UL and ended the copper antagonism risk
Elemental calcium (capsules)	202.5 mg	82 mg	UL 2,500 mg/day	Capsules only — beverage calcium is excluded here; aggressive hydration required when calcium runs high
Potassium	1,269.7 mg	1,220 mg	No formal UL	RapiDrem's 1,000 mg per scoop requires intact renal filtration — surveillance applies
Caffeine + tea	~373 mg + 40–70 mg Earl Grey	0 mg	400 mg/day guidance	State A morning sits above the guidance figure with tea — logged, not hidden

Chapter 9 — Planning over months and years

Weekly organizer rule. What is daily, what is training-only, and what is optional is decided before the week starts. If it is not in the organizer, it is not improvised. Seven days, four windows a day. Rest-day de-escalation halves the weekly clearance load: midday, afternoon and night grids are deliberately skipped on State B, and that skip is part of the design, not an omission.

Progression rule. Load progresses only while the locks stay quiet. Supported variations first; the trainer selects resistance, range and progression. The 100-rep band deload (State A, 10:30) is a fixed deload anchor, not a training set.

Scan cadence. Scans are compared only under matched conditions (Chapter 2). No scan result rewrites a ceiling without a dated observation entry.

Chapter 10 — Connective tissue and injury

Connective tissue remodels at roughly one-third the speed of muscle. The system feeds it first (V3 marine collagen at 04:00, before breakfast) and supports it in the afternoon window (Pure Ligament Restore, 2 capsules, 15:30, training days). Green support emphasis stays restrained: a planted leg, seated pelvis or braced hand supplies support, not maximal activation. Hinge work respects the L4–S1 ceiling (rack pulls above the knee, chest-supported rows, braced belt work). The ulnar-nerve rule is absolute: symptoms set the stop.

Chapter 11 — Hormonal and metabolic regulation

Morning hormonal stack: TestoFX Xtreme 3 capsules (500 mg fenugreek, 250 mg Sensoril ashwagandha, 200 mg DIM, 9.5 mg piperine) + standalone boron 3 mg (New Roots) at 03:30–03:45. Training-day piperine total with lunch curcumin: 14.5 mg. NMN 175 mg (California Gold Nutrition) in the morning window. The cholinergic stack is two-sided: citicoline primer + formula choline + huperzine-A (200 mcg V1 mornings; 50 mcg V6 evenings) — the V1 morning tail can reach the night on training days, and the V6 evening tail is eliminated as a current cause while V6 is dormant (since May 2026). Caffeine accounting is printed in full (Chapter 8): State A mornings run above the 400 mg/day guidance figure with tea, and that is logged rather than hidden.

> **Five-lens block — V1 Ignition. Mechanism:** adrenergic drive + cholinergic stack + citrulline nitric-oxide route + osmolyte hyper-hydration. **Stack interaction:** citicoline capsule (05:30) pairs with formula choline; theanine smooths caffeine; beta-alanine 3.2 g is a full daily dose. **Margin:** caffeine ~373 mg + 40–70 mg tea sits above the 400 mg/day guidance figure — logged. **Monitor:** sleep latency, resting pulse, GI tolerance, tremor. **Stop rule:** palpitations, sustained insomnia, or GI distress — drop the session stimulant and review the stack before the next State A day.

> **Five-lens block — V6 Pump. Mechanism:** nitric-oxide hyperemia without stimulants (citrulline + arginine + nitrate routes) + glycerol hyper-hydration. **Stack interaction:** 5,000 mg betaine on V6 days; 4–5 g taurine total; native creatine counted separately. **Margin:** 0 mg caffeine protects sleep; evening huperzine-A 50 mcg carries a 10–24 h tail — dormant since May 2026, so no current evening tail is running. **Monitor:** evening sleep onset, next-morning grogginess. **Stop rule:** vivid dreams or broken sleep on State C days — pull V6 and review the cholinergic load.

> **Five-lens block — creatine. Mechanism:** phosphocreatine store for ATP re-synthesis between sets. **Stack interaction:** standalone HCl 1.5 g/day (two 750 mg pulses) + V6-native monohydrate 1,000 mg on State C days, never summed. **Margin:** HCl kept out of V1 to preserve blood velocity. **Monitor:** body-water shift on scans, GI tolerance. **Stop rule:** persistent GI distress — hold the pulse and review.

> **Five-lens block — zinc / copper. Mechanism:** zinc and copper compete for absorption. **Stack interaction:** Zinc Supreme removal cut 30 mg supplemental zinc; copper is paused. **Margin:** training-day zinc 25 mg vs UL 40 mg/day.

Monitor: zinc/copper labs, immune and GI signs. **Stop rule:** any clinician flag on copper status — do not restart copper without a ruling.

Five-lens block — Creami gum. Mechanism: gum network stabilizes the frozen matrix; collagen peptides do not gel — gums stabilize. **Stack interaction:** ONE gum only; dose is conditional on base type. **Margin:** ~0.25% w/w anti-slime law; over-dosing slimes the pint. **Monitor:** texture after re-spin (powdery vs slimy). **Stop rule:** slimy pint — cut the gum dose at the next build; do not add a second gum.

Five-lens block — lipid pacing (no gallbladder). Mechanism: continuous bile trickle, no stored bolus. **Stack interaction:** Digestive Enzymes Ultra with every meal; fat split into small, frequent loads. **Margin:** 69 g/day lipid ceiling; 60–90 g fat sittings are the highest-probability GI event — addon enzymes must match the meal. **Monitor:** post-meal GI symptoms, stool tolerance. **Stop rule:** repeated GI events after a fatty meal — split the fat further and review the enzyme match before repeating the meal.

Chapter 12 — Closing system synthesis

The whole-day equation

One day = one state (A, B, or C) × eleven timed stages × three hard ceilings (2,780 kcal / 252 g protein / 69 g fat) × one hardware fact (no gallbladder) × one measurement discipline (dual measures, 0.1 g scale, dated observations). Change any one factor and the rest must be re-checked: a Pathway B pint moves the lipid firewall; a State C day moves the cholinergic tail into the night; a rest day removes ten lunch capsules, six afternoon capsules and the night grid by design.

How the parts interact

Vectors set the windows; pills set the background; food sets the substrate; bands set the stimulus; the Frozen Kitchen sets the repeatable low-fat, high-protein close. The cholinergic stack crosses from morning into night. Potassium and glycogen cross from the shaker into the scan. Fat pacing crosses from the gallbladder into every meal. No part is evaluated alone — risk lives in combinations, not single bottles.

Limits

This system has no verified whole-day intake total, no measured joint loads, no resolved Hexapro scoop conflict, no Pathway C recost, and no owner ruling on the V5 collagen type or the companion lists. Those limits are printed in the Gap Log rather than papered over. A future edition that resolves any of them must print the ruling, the date, and the new value — not silently replace the old one.

Gap log — stated gaps and conflicts (not filled, not smoothed)

ID	Item	Status
G-V5	V5 collagen type	CONFLICT inside the Muse sources: the detailed V5 card prints marine collagen 1 scoop, about 10 g; the Muse summary and the Guidebook slate print bovine collagen 10 g for V5. This book follows the detailed card (marine) and flags the conflict. Owner ruling pending. The parent mega-script Part 4 agrees with marine, but it was NOT used to override the sources — the detailed card already governs.
G-V3	V3 base-fluid volume	GAP: neither the Muse sources nor the mega-script Part 4 state a V3 base-fluid volume — only "cold water + separate greens flush". No volume is printed for V3 anywhere in this book.
G-BET	V1 optional extra betaine	CONFLICT, source governs: the parent mega-script Part 4 notes an optional extra ~1/2 tsp (~1.6 g) betaine for a V1-day total of ~4.1 g. The Muse V1 card prints 2,500 mg flat. The card dose (2,500 mg) is printed; the optional extra is NOT adopted as card dose.

G-SILK	Pathway C (Silk) recost	GAP: full recost pending owner SKU confirmation. Pathway C is flagged, never costed with Pathway A numbers.
G-HEX	Hexapro scoop conflict (permutations 1–7, 15–17)	FLAGGED, never fudged: the source records a scoop conflict for the Hexapro family. Ledgers are printed as given; the conflict is not resolved by adjusting a number.
G-PIL	Pilates 12-slot order	GAP: the two Pilates days each run 12 slots from the Pilates-kit sequence set, but a slot-by-slot Pilates order is not stated in the extracted source. This book prints the sequence set, not an invented order.
G-F4	Companion material	EXCLUDED by brief: the Muse companion lists are not imported. Harvested nutrition only.
G-RAP	RapiDrem sodium declaration	DISCREPANCY recorded, not resolved: panel declares sodium 0 mg while NaCl appears in the ingredient list. Pink salt is dosed separately (1/16 tsp) and no hidden sodium is assumed.

Provenance note (auditable). One stage-card detail in this book comes from the parent-delivered mega-script Part 4 because the Muse sources are silent on it: the V2 BCAA brand qualifier "Perfect Sports" (BCAA HyperClear 1 scoop / 7.5 g). Everything else in the stage cards is Muse .src. The mega-script was not used for nutrition, ledgers, or targets, and never overrode a .src value.

Source register (sources only)

Source	What it supplied
Muse Encyclopedia (technical line source edition, labelled as a source here only)	Targets and ceilings, chronometer, pill grids, dose accounting, vector cards, 69-slot week, technique library, bundles, Frozen Kitchen system and ledgers
Muse Guidebook (technical line source edition, labelled as a source here only)	Vector slate and detailed stage cards (V1–V6 + V10), chronometer cross-check, dose accounting cross-check
Instagram nutrition pull, 6 Oct 2026	11 harvested meal recipes, 5 highlight meals, 6 oz protein table
Parent-delivered mega-script Part 4 (gap-fill only)	One detail only: V2 BCAA brand qualifier "Perfect Sports" — see Gap Log provenance note. Not used for nutrition, ledgers, or targets; never overrode a source value

Chapter order follows the 12-chapter skeleton structure (structure only — no data, numbers, claims, or wording carried from the skeleton source). No workflow, version-history, or integration chapter is included: this is a reader-facing technical reference.
