

Project 100 Marketing Slider V2.0

100 lb of muscle. Below 15% body fat. At 46.

88.2 → 100 lb

Skeletal muscle mass, BIA-estimated

22.9 → <15%

Body fat, personal goal

23.86 → 25.71

Fat-free mass index

Bogdan Dospi, 46. One person's documented system — not a prescription. Symptoms override the schedule.

The comeback, in five eras

2010–2020

The base years —
training history
before the fall.

2020–2025

Heavy alcohol use.
Hepatic steatosis
(2021), sarcopenia,
broken sleep.

2025

Cessation. The
excavation begins —
constraints before
loading.

Feb 2026

Baseline: 197.1 lb,
88.2 lb SMM, 22.9%
body fat.

Mar–Sep 2026

The rebuild.
Retraining,
chronometer,
vectors, monitoring.

One equation runs the whole day

Intake

Solid fuel, logged

× Vector

V1-V10 liquid payloads

× Time

Chronometer anchors

Training branch

Full grid: V1-V4, pill blocks, 03:30-18:30 anchors.

Rest branch

Deliberately smaller: meal + enzymes, V10 only. Training grid skipped.

Ten vectors. Every one has a job.

- **V1 Ignition** — pre-training stimulant payload, ~373 mg net caffeine
- **V2 Refuel** — intra-training carbohydrate, 2–3 dates, 36–54 g fast carbohydrate
- **V3 Recovery** — rapid amino acid and greens flush, 20 mL separate
- **V4 Reload** — post-training shake, one reduced 36 g BioSteel scoop
- **V5** — afternoon branch vector
- **V6–V9** — supporting daily vectors across meal blocks
- **V10 Shutdown** — nocturnal recovery: glycine, magnesium on training nights only
- Every vector audited in V2.0 for interaction cascade and margin
- Retired myths stay retired: no 60–65°C drink rule, no hot-water bile flush

Five interactions decide the risk

1. Piperine drug-clearance inhibition

14.5 mg/day piperine inhibits P-glycoprotein, CYP3A4 and glucuronidation — raising exposure to the whole stack.

2. Cholinergic pressor stack

Citicoline 250 mg + Alpha-GPC 200 mg + DMAE and choline salts against Huperzine A 200 mcg blocking breakdown.

3. ALA and low carbohydrate

R-ALA 300 mg plus only 19 g carbohydrate in V4 — insulin autoimmune syndrome mechanism in susceptible HLA carriers.

4. Osmotic GI stack, no gallbladder

Magnesium 341–646 mg scenarios plus high-dose vitamin C 452.9 → 2,452.9 mg, on a continuous bile trickle.

5. Stimulant stack at the ceiling

~373 mg caffeine plus theacrine (half-life 16–20 h), Dynamine and theobromine. Morning Earl Grey 40–70 mg stacks on top.

Every dose sits beside its limit

Item	Project 100 dose	Reference limit
Magnesium (supplemental)	341 / 446 / 541–646 mg scenarios	350 mg supplemental upper limit
Vitamin C	452.9 → 2,452.9 mg	Osmotic threshold, monitor GI
Zinc	25 mg (Zinc Supreme removed)	30 mg zinc dose eliminated
Caffeine	~373 mg net	Health Canada 400 mg/day
Boron	1 × 3 mg, locked	Separate copper paused

V2.0 adds the margin to every protocol. The dose did not change — the accounting did.

Your labs can lie. Three fixes.

01 Biotin 425 mcg/day

Distorts streptavidin-biotin assays: falsely high free T4/T3, testosterone, cortisol; falsely low TSH, troponin, PTH. Disclose before every draw.

02 Creatine depresses eGFR

Creatine HCl 1.5 g/day expands the creatinine pool. Cystatin C eGFR is the corrective kidney check.

03 Testosterone needs morning draws

The March 2026 value (7.4 nmol/L at 13:28) is an afternoon trough. Diagnosis needs two fasting 07:00–09:30 draws.

The day, anchored

Anchor	Training branch	Rest branch
03:30 Wake	TESTOFX 3 caps, boron 3 mg, LactoBif intermittent	Same
04:00	V3 Recovery (when consumed)	V3 (when consumed)
05:00 Meal 1	Kasha breakfast, Earl Grey, Kyolic, NAC, NMN, enzymes	Meal + enzymes only
05:30–06:00	Citicoline 250 mg T-30, then V1 Ignition	—
09:30 Intra	V2 Refuel + 2–3 dates	—
11:00 Post	R-ALA whole, then V4 Reload	—
16:00–18:30	V5, V10 Shutdown; Medi-C half optional	V10 only

Reference clocks, not rigid deadlines. The evening PUMP branch is inactive.

Train the hardware you have

- **L4-S1 lumbar spine** — chest-supported rows, belt-squat and leg-press variants, bracing. No floor deadlifts (personal constraint).
- **Ulnar nerve** — neutral grips, Versa Gripps. Numbness or progressive weakness is a referral, not a tweak.
- **Excavation blocks** — controlled repetitions, slower eccentrics, progress reps before load.
- **Deload is planned** — connective tissue lags muscle; symptom codes gate progression.

Fuel after cholecystectomy

Continuous bile trickle

No meal-triggered bile release. Large fat boluses overwhelm micellar solubilisation — steatorrhea, bloating, loose stool.

Enzymes assist, not replace

Digestive Enzymes Ultra: 1,500 FIP lipase per capsule. Aids hydrolysis; does not replace bile salts.

Protein across the day

At 46, anabolic resistance is real. Leucine-threshold protein at each meal, not one giant bolus.

Retired: the hot-water flush

Hot water does not emulsify fat in vivo. Beverages above 65°C carry oesophageal cancer risk (IARC).

23 pill records, all audited

Locked statuses

Zinc Supreme removed. Separate copper paused. Boron locked to 1 × 3 mg. Training grid skipped on rest days. Evening PUMP branch inactive.

Meal-1 block

Kyolic, NAC, NMN, digestive enzymes, TESTOFX, boron — audited for mechanism and interaction in V2.0.

Lunch and afternoon grids

Every capsule checked against the five interaction cascades.

Evening grid

Magnesium glycinate, tart cherry, V10 Shutdown. Medi-C half optional; Hey Relax rare.

Symptoms outrank the schedule

Stop and refer

- Ring or little-finger numbness, progressive weakness → ERR_ULNAR_01 pathway
- Cholinergic signs: bradycardia, fasciculations, salivation, GI cramps
- Stool changes from the osmotic stack

Deload, do not push

- Symptom codes gate load progression
- One bad BIA reading never changes the diet
- Rest branch exists for a reason — use it

Full red-flag checklist: Annex II of the Project 100 Encyclopedia V2.0 — built for clinician discussion.

Every claim carries its evidence tier

Established

Clinical consensus. Cessation, retraining, progressive load, morning testosterone draws.

Supported

Human trial evidence. Creatine, protein thresholds, magnesium glycinate for sleep.

Plausible

Mechanistic rationale without decisive human trials.

Unproven

Marketing extrapolation. No fasting testosterone-release claim, no 45° disc decompression.

One encyclopedia. Everything else follows.

- **Project 100 Encyclopedia V2.0** (2026-10-03) — the single master volume. Full Detailed Version and Complete Clinical Analysis merged into one definitive book: 12 chapters, vector deep dives, five interaction cascades, toxicological margins and the lab integrity playbook.
- **Guidebook V2.0** — the condensed daily manual, generated from the Encyclopedia. Every protocol carries the 5-lens check: mechanism, interaction, margin, monitor, stop rule.
- **Simplified Structure V2.0** — the plain-language entry point, generated from the Encyclopedia for presentation and first reading.
- Plus this Marketing Slider V2.0 for release, partners and the website download section — also generated from the Encyclopedia.
- All dated 2026-10-03. All operational data identical to the locked V187.01 record. One source of truth.

Three doors on project100.fit

Start here

</fit-protocol.html> — the 5-minute visual walkthrough. Stats, arc, system.

Go deep

</fit-protocol-archive.html> — the Project 100 Encyclopedia V2.0, ebook-style, chapter by chapter.

Run it daily

The Guidebook — printable daily manual, with this slider as the PDF download.

One master brand: PROJECT 100. Instagram [@fudge_fit](#) is the live feed; the site is the record.

V2.0 monitoring plan

- **BIA discipline** — same device, waking, post-void, pre-intake, trended over weeks.
- **Lab protocol** — disclose biotin; cystatin C eGFR on creatine; two fasting morning testosterone draws.
- **Interaction watch** — cholinergic signs, osmotic GI markers, stimulant sleep cost.
- **Symptom codes** — CT_ELLOW_01, ERR_ULNAR_01 and the red-flag checklist (Encyclopedia Annex II).
- **Version control** — the Encyclopedia V2.0 is the master. Every derivative, this slider included, is generated from it. Filenames carry V2.0 and 2026-10-03.

A person is seen from behind, performing a pull-up on a horizontal bar in a gym. The person has short, dark hair and is wearing a dark blue t-shirt. The gym environment is visible in the background, with various pieces of equipment and bright overhead lights. A white rectangular box with rounded corners is overlaid on the center of the image, containing text.

The excavation continues.

Project 100 — the Encyclopedia V2.0 is the master volume. Guidebook, Simplified Structure and this slider are all generated from it, 2026-10-03. The full protocol lives at project100.fit.
