One protocol. Every exercise.

R1-R3 describes equipment options; exercise technique is written once.

R1 / Single band / one kit

Record one selected band per working line. A single KUZARO kit contains one of each label, so identical paired lines may be unavailable; use one side at a time when needed.

R2 / Two-kit options

Up to two matching bands of a selected rating can be available per line. Separate matched handles and combined bands on one line are different setups; record which you use.

R3 / Four-kit options

Up to four bands of a selected rating can be available per line. This describes equipment availability, not a required load or a harder version of the movement.

The six KUZARO labels

35 / 45 / 55 / 65 / 75 / 85 lb. One of each per kit; the labels total 360 lb across the kit, not on one working line.

HPYGN is a separate system

Four 65 lb bands total; two per side = 130 lb nominal per side and 260 lb combined nominal. Do not substitute the paired short-band/bar configuration into a long-line exercise automatically.

Read the gauge beside each exercise

Choose a suitable band label and count, then record the nominal label total per working line. The orange meter is an availability record, not a target to fill. For equal-rated bands: label x count = nominal total. Independent left/right lines are recorded separately.

Label pounds are not measured force at the hands, a hardware rating or a free-weight equivalent. Tension changes with stretch, anchor height, starting distance and movement range. An unloaded exercise clearly says NO BAND.

No personal load is assigned. Even one labelled band may be too much; use unloaded practice or an appropriate lighter option where needed.

Sets and repetitions are separate.

One repetition is one complete movement. One set is a group of repetitions before a rest.

Shared starting baseline

Two sets for main exercises; one for supporting exercises; one easy set for control drills. Stop while about four more good repetitions remain possible. Rest about 60-120 seconds or longer as needed.

Your seven-day rhythm

DAY 1 / Push / shoulder control

DAY 2 / Lower body / supported base

DAY 3 / Pull / arm control

DAY 4 / Rest / recovery

DAY 5 / Full body A / moderate

DAY 6 / Full body B / easy practice

DAY 7 / Rest / recovery

Keep the two full-body days different

Day 5 uses no more than two sets. Day 6 is only one easy set, with at least five more good repetitions possible, or take rest. Days 4 and 7 are rest days. R1-R3 does not override these settings.

Three muscle roles

RED / Main movement focus.

BLUE / Secondary assistance and local control.

GREEN / Base and supporting position.

Bands stay orange-edged charcoal. A muscle can change role between exercises. Colours illustrate roles, not measured activation; read the details for hidden muscles.

Read the setup protocol next, then follow your day’s session and its linked exercise sheets.

READ BEFORE TRAINING

Set the base. Then move.

Inspect anchors, bands, clips and interfaces; use stable supports. Warm up with 5-10 minutes of comfortable activity and unloaded movement rehearsal.

1. Set your base

Plant feet and establish bench or chair contacts. Keep joints soft instead of forcing a hard knee or elbow lock.

2. Brace gently and breathe

Firm the trunk gently while breathing normally. Keep the intended support areas quiet without freezing joints that need to move.

3. Make the movement

Move smoothly through a comfortable arc. Exhale on effort, keep grip neutral where possible and keep recoil away from the face.

4. Return slowly and check

Control the recoil. End the set before twisting, shrugging, leaning or loss of balance changes the movement.

Equipment and progression

Select resistance only after confirming comfortable motion, control, anchor/attachment ratings and current tolerance. Bodyweight or unloaded practice is valid. A 35 lb labelled band may already be too much. Label sums are not measured hand force or hardware ratings.

One KUZARO kit contains one each of 35, 45, 55, 65, 75 and 85 lb bands. Use one limb at a time if identical paired lines are unavailable; do not mismatch sides.

HPYGN is separate: four 65 lb bands total, two per side = 130 lb nominal each side and 260 lb combined nominal. These are label sums, not measured resistance.

Stop for pain, new numbness or weakness, dizziness, loss of grip, moving supports or damaged bands. Keep the recoil path clear. Follow manufacturer limits and individual clinical restrictions.

Recover before repeating.

Day 6 is easy skill practice, not a second hard full-body session. Rest instead if there is residual fatigue, pain or altered control. No schedule can guarantee injury prevention.

Rest on days 4 and 7. Check comfortable daily movement, grip, joint symptoms and ability to repeat the setup. Use another rest day or reduce the session if control or recovery is reduced.

Progress one factor at a time

Establish repeatable technique and comfortable range first. Add repetitions within the range before considering a small resistance increase. Reassess control after each change. No level requires the heaviest bundles.

Stop for pain, new numbness or weakness, dizziness, loss of grip, moving supports or damaged bands. Keep the recoil path clear. Follow manufacturer limits and individual clinical restrictions.

Source scope

Personal movement names and equipment records come from Kinetics. Supported complements and cues are editorial adaptations. They are not a clinician-approved personal rehabilitation plan.
